Research Opportunities for Research Postgraduate Students (PhD, MPhil) in the Division of Biostatistics

The Division of Biostatistics aims to provide academic excellences by developing Biostatistics research in three major areas:

1) Clinical trials methodology including pharmaceutical statistics, trials design and analysis, and bioethics;

2) Public Health issues including infectious disease modelling, quantitative analysis of large data base on health care system and health policy;

3) Bioinformatics including microarray data analysis, image processing and diagnostic methods.
